

What's the process for Partial Hand Delivery?

Please refer to [Partial Hand Production Steps for Clinicians](#) for more details.

How much does a Partial Hand cost? Can I get a quote?

We are pleased to provide quotes on request. Each partial hand is designed uniquely for each patient. Note, we can provide estimations on device FABRICATION only, componentry costs are not included. . In order to provide a quote, please provide us with amputation level and number of fingers to be fabricated.

Do I need to order parts?

Yes. Clinicians are responsible for ordering components and providing them along with the device design specifications.

Where can I order the Partial Hand parts?

Hanger Direct, (internal) or College Park (external)

[Catalogue of parts](#)

How do I cast the patient?

We recommend using Body Double or Gray Impression Material

Cast requirements are dependent on the type of device you are ordering:

- Full M-Fingers: up to the cubital fold
- Partial M-Fingers: 6" past the wrist
- Titans: 2" past wrist

Best Practice: Sound side mold is not required but ok to send as well.

How long does it take to finish?

Device fabrication time can vary with the /design. In general:

- Silicone only requires less time (2-3 weeks).
- Fitting devices with a prepreg frame takes approx. 3-5 weeks.
- Final device: 2-4 weeks from date of return.

Fitting dates cannot be determined until all parts to support the project have been received. Parts can take up to 2 weeks to arrive.

What determines the device features?

Designs are determined by each patient's needs and not esthetics. Special requests may or may not be accommodated if results of design will limit proper function. Designs are being continuously being updated. Please view our most recent pictures of devices. If you have a specific design in mind, please note that on order form to discuss further.
